

# TISSUE PAPER PROJECT

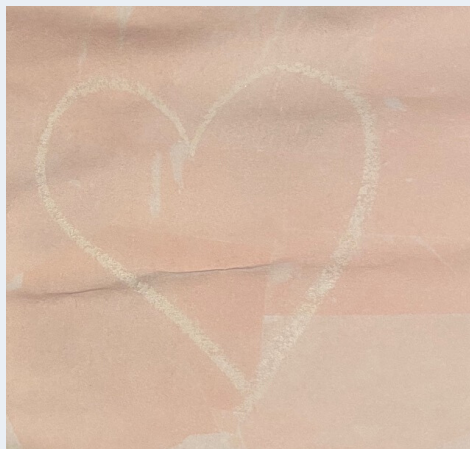

## What You'll Need:

1 inch squares of colored tissue paper, white crayon, paper, water. This works best with bleeding tissue paper. The color will be more subtle otherwise.

## Procedure:

1. Create a design on your paper using your white crayon.
2. Wet your paper.
3. Place the tissue paper squares on the wet side of the paper. Add more water on top (using a spray bottle or paint brush) to speed up the process.
4. Let dry and remove tissue paper.

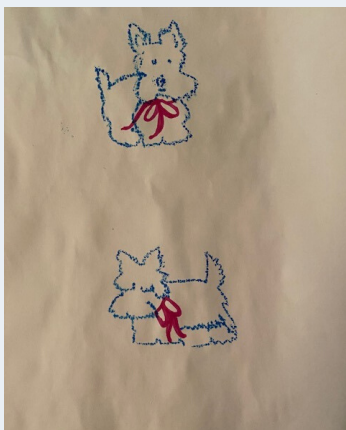

# EASY PRINTMAKING

We used a piece of fabric that had a pattern on it. This is before tracing it.

After printing & air drying.

Add details afterwards with markers!
